

Threads Portfolio App Summary

WHAT IT IS

A single-page portfolio web app for Rian Touag, built with Next.js App Router and TypeScript. It presents project work, designer profile details, and social links with animation-heavy UI interactions.

WHO IT'S FOR

Primary persona: recruiters, hiring managers, founders, and collaborators evaluating a senior product designer.

WHAT IT DOES

- Displays an animated intro with profile info, last-updated date, and social links.
- Renders portfolio work groups from structured data in 'lib/work-groups.ts'.
- Provides draggable project image carousels with responsive sizing and gesture handling.
- Opens desktop image lightboxes with keyboard navigation and preloading.
- Supports theme selection via 'next-themes' with system preference initialization.
- Generates SEO metadata, structured data, sitemap output, robots file, and web manifest.
- Tracks interactions using a visitors script ('cdn.visitors.now') and typed 'window.visitors' events.

HOW IT WORKS (REPO-EVIDENCED ARCHITECTURE)

- UI layer: Next.js App Router ('app/layout.tsx', 'app/page.tsx') composes intro + work sections.
- Component layer: 'components/' manages smooth scroll (Lenis), carousels, lightbox, and theme wrappers.
- Data/config layer: 'lib/work-groups.ts', 'lib/site-config.ts', constants, hooks, and image utilities.
- Build-time scripts: 'scripts/generate-blur-placeholders.js' and 'scripts/get-last-commit-date.js' produce JSON used at runtime.
- Static assets: project images/logos/icons/profile files under 'public/' consumed via Next/Image or @unpic/react.
- External services: visitors analytics script loaded in layout; no internal API routes found.
- Persistent database or backend service: Not found in repo.

HOW TO RUN (MINIMAL)

1. Install dependencies: 'npm install'
2. Start dev server: 'npm run dev'
3. Open 'http://localhost:3000' in a browser.
